SKILLS AND CERTIFICATIONS

Languages - Golang, Python, C++

Software Engineering - Gin, FastAPI, Git, Linux, MySQL, Jenkins

Virtualization & Cloud - VMware, Nutanix, AWS, Azure

AI & Data - RAG, AI Agents, Langchain, Langgraph, Pyspark, Databricks

Certification - IBM Data Engineering Professional Certificate [[Certificate](#)]

WORK EXPERIENCE

Datamotive Technologies, Pune — *Junior Software Engineer*
— *Backend Intern*

September 2025 - June 2026

June 2025 - September 2025

Disaster Recovery & Cloud Migration -

- Contributed to a production-grade VM-level disaster recovery and cloud migration platform, developing backend features and resolving bugs in Golang-based microservices.
- Worked on developing an **AI agent** for block-level disk **ransomware detection** and security analysis.

Nutanix Image Packaging & CI Automation -

- Set up a **Nutanix** base-image VM and **Jenkins** job for image builds; wrote **Packer** scripts to automate VM provisioning, service registration, and generation of compressed **QCOW2** images for customer delivery.

Golang Infrastructure & Automation Utilities -

- Built Golang-based infrastructure discovery utilities across **VMware**, **Nutanix**, and **Azure** environments to collect customer infrastructure data prior to product installation, enabling compatibility validation between the Datamotive platform and target environments.
- Designed a Golang-based network monitoring and diagnostics tool to troubleshoot replication failures, capturing client-side **network statistics** and generating **TCP-level** performance analysis reports (visualized via Python).
- Engineered a Golang-based automation tool to eliminate manual post-recovery configuration on Windows VMs, handling sysprep, SAN policy setup, IP address/hostname updates, Active Directory rejoin, and DNS record updates to avoid manual reconfiguration after recovery.

EDUCATION

Vishwakarma Institute Of Information Technology,
Bachelor Of Technology in Information Technology, CGPA - 9.05

Pune
2021-2025

PROJECTS

SREAgent -

- Built a **multi-agent AI system** using **LangGraph** and **LangChain** to diagnose failed Jenkins builds by identifying code bugs, test failures, resource limits, permission issues, and missing files/dependencies, then investigating failures and creating **GitHub pull requests** with proposed fixes.
- Secured and deployed the system using **Azure Key Vault** for credential management, Jenkins request validation, a persistent auto-restarting service, database-based build history, and Slack notifications for build completion.

ProductPulse AI -

- Built a retail AI copilot using **Databricks**, **RAG**, PySpark, Lakebase, and Qwen embeddings to process structured data and PDFs.
- Developed a Llama-powered Streamlit app with **LLM-based tool planning** to answer product, returns, support, and metric queries.
